

ENGAGEMENT OBJECTIVES

- Establish a centralized Security Operations framework
- Strengthen application and infrastructure security
- Automate DevSecOps security workflows
- Improve vulnerability tracking and remediation
- Enhance PCI compliance and audit readiness

CASE STUDY

ENTERPRISE SECURITY OPERATIONS & DEVSECOPS TRANSFORMATION

Implementing a unified security operations framework with continuous monitoring, DevSecOps automation, infrastructure security, vulnerability management, and PCI compliance.

BUSINESS CHALLENGES

- High SOC alert volumes and false positives
- Security gaps across code repositories
- Fragmented vulnerability management
- Duplicate cloud-security findings
- PCI compliance reporting
- Limited security visibility

ENGAGEMENT HIGHLIGHTS

- 80+ GitHub repositories secured
- 30+ SOC security views monitored daily
- 2 GitHub organizations integrated
- 3 PCI assessments successfully completed
- Real-time threat detection and alert automation
- Unified security governance across SOC, DevSecOps, and Cloud

EXECUTIVE SUMMARY

Opt IT implemented an integrated Security Operations and DevSecOps program that unified SOC monitoring, application security, infrastructure protection, vulnerability management, and compliance processes. The solution improved threat visibility, streamlined remediation workflows, reduced operational overhead, and strengthened the client's overall security posture.

SOLUTION DELIVERED

SECURITY OPERATIONS

- Continuous SOC monitoring
- SIEM correlation & dashboards
- Alert tuning & threat triage
- Real-time anomaly detection

DEVSECOPS SECURITY

- SAST (Semgrep & Gosec)
- Secret scanning with Gitleaks
- GitHub Actions automation
- Software Composition Analysis

CLOUD & INFRASTRUCTURE SECURITY

- WIZ & GCP SCC analysis
- Vulnerability validation
- Remediation prioritization
- Security posture improvement

GOVERNANCE & COMPLIANCE

- PCI assessment support
- Jira-based vulnerability workflows
- SLA tracking & notifications
- Standardized bug governance

BUSINESS OUTCOMES

- Reduced SOC false positives through continuous tuning
- Automated security across 80+ GitHub repositories
- Faster vulnerability remediation with SLA-driven workflows
- Improved PCI audit readiness and compliance
- Unified visibility across SOC, DevSecOps & Cloud Security
- Reduced operational effort through automation

VALUE DELIVERED

- Unified security operations
- Automated security workflows
- Faster incident response
- Continuous compliance readiness
- Standardized vulnerability governance
- Improved cloud security visibility

READY TO STRENGTHEN YOUR SECURITY OPERATIONS?

From proactive threat detection to DevSecOps automation and compliance management, Opt IT helps organizations build secure, scalable, and resilient security programs.
